Project Title: Analytics for Hospital Health-Care Data **Project Design Phase-I - Solution Fit Template** **Team ID:** PNT2022TMID04514

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

Hospital management and patients

6. CUSTOMER CONSTRAINTS CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

Could not predict the Length Of Stay of patients properly especially during the pandemic period

5. AVAILABLE SOLUTIONS AS

Which solutions are available to the customers when they face the problem
or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

Hospital bed management using data mining techniques

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

Proper data analysis is needed for various needs of patients

9. PROBLEM ROOT CAUSE RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

Insufficient analysis in data ,human error and poor scheduling

7. BEHAVIOUR BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

Regularly monitoring the database of patients to avoid error

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS TR

What triggers customers to act? i.e. seeing their neighbour installingsolar panels, reading about a more efficient solution in the news

Prevailing emergency situations and Pandemic period situations

4. EMOTIONS: BEFORE / AFTER EM

BEFORE: Unstable physical and psychological state during the pandemic period

AFTER : Physical and psychological comfort and security to the patients. Improved bed allocation facilities

10. YOUR SOLUTION SL

Using **predictive analysis** powered by the AI which is used in analytics technique
Proper Data analysis and implementation in **Interactive dashboard**

8. CHANNELS of BEHAVIOUR CH

8.1 ONLINE

Usage of data exploration, Secured Login.

8.2 OFFLINE

Maintaining Data set for the patients occupancy period, predicting the LOS with doctors

Identify strong TR & EM
